

InnoSphere Ventures

Welcome.

Empowering Innovators, Elevating Futures

If you've ever wondered how real technological progress actually happens — not headlines, not hype, but the slow and difficult work of building something that matters — you're in the right place.

InnoSphere Ventures exists to support deep-tech entrepreneurs across India who are building foundational technologies, often far from the spotlight. We back them early, share risk alongside trusted partners, and help them connect to global markets when they're ready.

Our investment teams are based in the US and Switzerland, with deep roots in India through long-standing local partnerships — including KIIT-TBI, our national deal-sourcing partner in Bhubaneswar.

This combination — local proximity and international perspective — shapes everything we do.

India as a Deep Tech Nation

India's startup ecosystem has grown quietly and steadily over the last decade. More than 200,000 startups have emerged — not as a bubble, but as infrastructure.

What we see forming is a long-term foundation for:

- homegrown technological capability, with defensible technology and IP, creating competitive products and services
- Strong job creation, where startups create high-value jobs and employment spillovers into entire value chains
- Economic sovereignty through national innovation capacity and industrial networks
- Domestic and export-led business growth, which results in strong investor returns

We think of this ecosystem as a forest, not a race.

Our role as early stage investors is not to chase unicorns — but to help strong systems take root and scale.

How We Invest

Our approach is deliberately simple.

We focus on three principles:

Early entry

We engage way before narratives are formed and valuations become established - promising outside returns at optimal, risk-adjusted entries.

Shared Risk

We invest alongside incubators, governments, angels, and international co-investors who are

close to the founders and the technology, and who have real skin as well as significant promise for further commercialization.

Catalytic

We structure early investments to preserve and expand optionality — not all companies are meant to be held the same way. How does this work?

- For teams building category-defining technologies, with exceptional growth potential and highly competitive, scalable business models, we concentrate conviction and support long-term value creation.
- At the same time, we retain the ability to realize early liquidity where outcomes mature faster or where capital can be more effectively recycled. We are mindful that in venture, distributed returns are everything.

But most importantly: We don't just invest in companies.

We help position them for follow-on capital, strategic partnerships, and international market access — so that capital follows performance, and our risks get compensated.

Edge Alpha — A New Paradigm for Venture Investing

Early-stage investing has long been treated as an exclusive art — shaped by intuition, experience, and personal networks. Judgment mattered, and it still does.

VC has also been a highly concentrated domain — shaped for decades by Silicon Valley culture, historically male-dominated, closed circles, and defined by restricted access to information and opportunities.

Today, AI and large language models make it possible to identify winning patterns across teams, technologies, company trajectories and valuations, and track entire innovation ecosystems — at a scale and consistency that was previously impossible.

Edge Alpha is built on this radical shift.

Our investment platform allows us to detect investment readiness earlier, compare signals more systematically, and allocate conviction with greater precision — particularly in frontier and under-mapped markets such as India.

Impact and Returns

We invest in areas such as agriculture, water, healthcare, energy, and frontier technologies — not because it sounds virtuous, but because these are structural markets with real demand, long time horizons, and defensible value creation.

Our belief is simple:

Long-term financial returns increasingly depend on solving and persistently hard to solve problems for human development and prosperity.

Impact, for us, is not a constraint on returns.

It is a filter against fragility, hype, and group think. This is where true alpha is born.

Our Portfolio

Today, we track more than 18 Edge Alpha companies and have made five initial investments across sectors including agriculture, water, healthcare, and spacetech.

Join the LP Collective

We are building a small, thoughtful LP Collective — investors who care about learning, contribution, and long-term value creation.

Minimum ticket size: USD 20k

Zero management fees until final close of LP Collective I

If this resonates, we'd be glad to talk.

Upwards & Onwards,

Jocelyn & Roman
